

# 'The copper's nose' project

This project will explore the phenomenon known as 'the copper's nose'.

## Key details

<b>Lead institution</b>	<a href="#">University of Cambridge</a>
<b>Principal researcher(s)</b>	Emily Quin <a href="mailto:emj44@cam.ac.uk">emj44@cam.ac.uk</a>
<b>Police region</b>	Eastern
<b>Level of research</b>	PhD
<b>Project start date</b>	January 2022
<b>Date due for completion</b>	January 2025

## Research context

The research is entitled 'The Copper's Nose' (TCN) Project.

The grounded hypothesis states that there exists a perceived colloquial phenomenon in policing: that police officers have an ability, developed beyond the ability of any non-trained civilian, to detect when something 'just doesn't feel right'.

In policing culture around the world, it is referred to as 'the copper's nose'. The phenomenon has been referenced in police recruitment campaigns, social media outreach, police training programmes, in various novels and official correspondence, and even in legal cases in the UK.

Despite this perceived existence of TCN, it is without a definition, and has not been researched or explored anywhere in the world. This research project will be the first to collect and record the views of police officers from around the UK in one of the largest projects of its kind and produce a universal definition and comprehensive understanding of the phenomenon.

## Research methodology

'The Copper's Nose' project is predominantly a qualitative study consisting of several hundred semi-structured interviews. The interviews will record data from collaborating forces across England and Wales.
