

Another Chance: A multi-centre randomised controlled trial of focused deterrence in England

A multi-centre randomised controlled trial evaluation of the effectiveness of focused deterrence interventions to reduce violent offending.

Key details

Status	Ongoing
Lead institution	University of Hull
Principal researcher(s)	Iain Brennan i.brennan@hull.ac.uk
Police region	North East
Collaboration and partnership	<ul style="list-style-type: none">• Paul McFarlane (UCL)• Will Graham (University of Abertay)• Alex Sutherland
Level of research	Professional/work based
Project start date	April 2022
Date due for completion	March 2027

Hypothesis

Allocation to the intervention condition will be associated with a:

- reduction in the number of violent offences compared to the control condition
- longer time to a violent offence compared to the control condition
- reduction in the number of co-offending violent offences compared to the control condition.

Geographical area

Manchester, Leicester, Nottingham, Coventry and Wolverhampton

Target sample size

2,500

Participants - inclusion criteria

Eligibility criteria vary across sites, but typically involve individuals at risk of involvement in violence aged 14 to 40 years.

Interventions

Focused deterrence.

Study design

Multi-centre, two-arm, stratified randomised controlled trials with random allocation of individuals.

Outcome measures

- Number of violence against the person offences (police records)
- Time to offence (police records)
- Co-offending (police records)
